
{arijdatatable} is processed, but no JS loaded

Posted by aleks86 - 2009/08/02 14:03

Hello!
I am having a problem with jTable module. It seems that it's processing my {arijdatatable} tags, and replaces them by ,
but, the table shows unchanged.
(http://webtrans.eu/index.php?option=com_logisticsmodulecatalog&view=default&Itemid=57&lang=en)
After looking through your example page's (<http://smart.ari-soft.com/ari-jdatatable.html>) HTML code I've seen that some .js plugins are being loaded, which are not loaded on my page.
Another problem happens, when I try to edit article text, adding jTable tag in there. It just saves the article without these tags, and everything that's inside them.
What am I doing wrong?

P.S. I am using mod_ariprocesscontent.zip to show content in my custom plugins. (Have tried to get plg_arismartcontentanywhere.zip to work, but failed.).
If you need access to my Joomla! administration or FTP - post your e-mail here and I will send them to you.

Try it now, please. We have configured ARI Smart Content Anywhere that it works with your custom component.

Regards,
ARI Soft
