## Help with arijdatatable and sql database

Posted by jerrykwilliams - 2011/11/28 01:12

---

I'm new to this and haven't been able to make this work using the descriptions in the plugins.

I have a database that I want to query and then display that data using jdatatable.

Here is the code I have in the article.

```
{arijdatatable}
{aristable bPaginate="true"}
  {aristableconnectionstring dbHost="localhost" dbUser="****" dbPass="****" dbName="****" dbType="mysql"}

  {aristablecolumns}
    {aristablecolumn id="id" alias="id" className="idg"}
    {aristablecolumn id="membernumber" alias="membernumber" headerClassName="head"}

  {/aristablecolumn}
{/aristablecolumns}

{aristablequery}
SELECT id AS id, membernumber AS membernumber FROM jos_mgamembers
{/aristablequery}

{/aristable}
{/arijdatatable}
```

Can someone point me to an example of a jdatatable that queries a mysql database.

Any help is much appreciated.

Hello,

If you want to show data from Joomla! database using "ARI JDataTable" plugin, use the next code:

```
{arijdatatable bPaginate="true"}
{aristable}
  {aristablequery}
    SELECT id AS id, membernumber AS membernumber FROM #__mgamembers
  {/aristablequery}
{/aristable}
{/arijdatatable}
```

PS: Check that "System - ARI Smart Content" plugin is enabled and if you use a WYSIWYG editor, switch it to plain text mode before inserting plugin code.

Regards,  
ARI Soft
