Mootable

Tried everything I could think of to format, tag, and simplify my way into making this work. I have included screenshots as I am local server for now.

New license  
Plug-in activated  
no editor  
no copy html  
duplicated layout for tables with no luck

would LOVE to make this work.

thank you.

Hello,

You missed opening TR tag for the second data row. Fix it and try again, please.

Regards,  
ARI Soft

I put in the missing field...still cant kick start this puppy.

Mootools is on, latest Yootheme template...am I still missing something obvious? <http://www.ari-soft.com/images/fbfiles/images/mootable3.png>

---

It's a bug in documentation. Use {arimootable} instead of {mootable}. We'll fix it in the next version of the component.  
Sorry for inconvenience.

OK...that fixed it.. thanks!

Question.

---

How much styling can you use in your table before this breaks...

Should the css references be outside of the tags and still work?

can styles in the tags work?

ex:

VILLAGES

5905  
BLASON TIMBERLAY 2007 WHITE BX  
\$110.00  
\$9.17

5389  
BLASON TIMBERLAY RED 2005  
\$114.40  
\$9.53

this is the formatted export from excel. Can this still work in ARIMOO?

thanks for the quick responses.

---

All attributes of HTML table elements such as row and cell remain untouched, you can also define needed CSS rules in 'CSS Templates' section on the component backend.

Great. Im making great progress here. Last question for today.

How/where do i set column width to open to widest cell like the right picture? <http://www.ari-soft.com/images/fbfiles/images/mootable5.png>

---

Hello,

Sorry for delay. Regarding your question, ARI MooTable plugin only supports possibility for specifying minimal width of all columns with help 'minColWidth' parameter.
