## Fatal error: Class '\AriJoomlaBridge\' not found

Posted by babben - 2012/02/09 10:41

---

Hi!

After trying to upgrade ARI Smart Content to 1.8.1 it stopped working.

Uninstalled old version.

Installed new.

Received various permission errors.

Disabled FTP-layer, installed again - other errors displayed.

Chmoded folders named in error messages to 777

Now receive error message: Fatal error: Class 'AriJoomlaBridge' not found in  
/var/www/xxxx/plugins/content/arismartcontent.php(18) : eval()'d code on line 35

when viewing a data table.

Suspect permission problems. Can you help please?

=====

Hello,

Could you provide a temporary access to your Joomla! backend and a link to a page where we can see described problem by email so we can investigate it?

Regards,  
ARI Soft

I have the exact same error message, after a (troublesome) upgrade from 174 to 181.

Trying to tun arijscroll.

I have sent logon details to ARI, please help.

Andre

Solved. Thanks.  
What did you do? What did I do wrong?  
I will have to reproduce this later in my production environment too.

Andre

---

We removed "ARI Smart Content" content plugin and enable "System - ARI Smart Content" plugin.

Regards,  
ARI Soft
