Redirection loop on smart content backend
Posted by jopizale - 2012/02/23 12:32

_____

Have been running Smart Content (ver. 1.8.1) with no problems on J! 1.7, but have recently updated J! to 2.5. I'm now getting a redirection loop on the backend for smart content, and hence can't edit any of the plugins.

Front end works fine, its just the back end :/

I've tried un-installing, and then re-installing the extension, just in case the J! update foobar'd something, but still no joy.

The message in the error log is:
PHP Notice: Undefined variable: task in /##/public_html/administrator/components/com_arismartcontent/admin.arismartcontent.php on line 27

Hope someone can help or point me in the right direction.

_____

Hello,

Download the extension from "Member Area" on our site and upgrade it.

Regards,
ARI Soft

Doh! Thought I'd already done that, turns out I hadn't.

Thanks for the speedy response.
