## Can Smart Content do this?

Posted by thecouponwiki - 2009/10/30 09:54

---

I just purchased Smart Content and am a bit confused as to how to accomplish what I want. I am trying to create a coupon database that is similar to the ones listed on the urls below. Can Smart Content do this and can anyone walk me through the steps? I've installed everything but am not sure where to start. I don't know how to configure a database but I can create a csv file. But if I do it via a csv file then will my users be able to access and add to the database? (That is one of the features I want, to allow all registered members to have access to add/edit their entries). Then I need to know how to give each user their own wishlist/coupon box.

If I'm not being specific enough, please let me know. I really appreciate any help anyone can offer. Thanks :)

Hello,

ARI Smart Content provides ability for showing data from database or CSV file, but it doesn't provide possibility for editing or creating data in database or CSV file.

Regards,  
ARI Soft
