
php error

Posted by sarrene - 2012/03/16 17:37

Good afternoon,

I have a persistent error that keeps popping up and I would like to know how to resolve this.

the php error I am receiving:

PHP Fatal error: Call to undefined method JDocumentFeed::addCustomTag() in
/xxx/xxx/public_html/administrator/components/com_arismartcontent/kernel/Document/class.DocumentHelper.php on
line 34

Thank you for your time,
Sarrene' Grant

Hello,

Could you provide a link to a page where we can see described problem and a temporary access to J! backend by email
so we can investigate an issue?

Regards,
ARI Soft

Hello and thank you for a fast response,
I have not seen an error actually occur on the site itself, however I did find this while trying to get rid of bugs.

I only use the sortable tables at this time. So this may be present elsewhere. The sortable tables seem to work well.

I have included a link to the sortable tables themselves. So far, no errors here that I can see.

The email is being sent now!

Thank you so much!
Sarrene' Grant
