
Replicate demo Example2: ARI CSV Table

Posted by New Sunrisw - 2012/03/30 01:01

G'day,

I was wondering if you can provide the exact code to replicate the Example 2 listed in <http://smart.ari-soft.com/ari-csv-table-plugin.html>

I can see you provided a sort of example in Usage 2... but I am still confused.

Additionally, could you please list the HTML tags used to display this module? I am asking because the module that contains the table's requires this information. So far I have listed: table,td,tr,th...

Many thanks in advance.

Cheers!

Hello,

The second sample wrap table which is loaded from a CSV file with ARI jTable plugin. The next code can be used:

```
{arijdatatable}
  {aricsvtable file="data/report.csv"}
{/aricsvtable}
{/arijdatatable}
```

Regards,
ARI Soft

Hello there,

Thanks for your reply.

Additionally, could you please list the HTML tags used to display this module?

I have to list the tags in the module that contains the table. So far I have listed: table,td,tr,th... but I am just getting a plain table, no search box, no filtering.

Thanks in advance,

Cheers

A table uses the next HTML tags:

TABLE
THEAD
TBODY
TR
TH
TD

Regards,
