display table content in calendar?

Posted by sbi - 2012/04/03 17:58

_____

Hi there,

Is there a clean way using ARI to display table contents as/inside a calendar?

Ex: A calendar of events and it's related information. Would like to display a count of the events for that date on it's appropriate place in the calendar. Clicking the number of events would show a list.

Any help is greatly appreciated. ARI Smart Content is a dream!

Hello,

The extension can show data in a table view based on data from a database or a CSV file.

Regards,
ARI Soft

_____

We have purchased the Smart Content pack. Is there any tool available there (or any other ARI product we could buy) that would achieve this?

Thanks so much!
