## Imap using arismart content

Posted by weidemannf - 2012/04/05 00:08

---

I am trying to use ariifancybox in an image map or imap... I can find the example in ari fancybox. is there a difference from fancybox and jfancybox? other than the "j" - can't seem to get it to work... i have spent hours looking in the forums for this answer but I can't find it. I purchased smartcontent and need to have an image/html pop up in an image map... thanks for your help.

Hello,

"ARI Fancybox" extension and "ARI JFancybox" plugin from "ARI Smart Content" are two different products. "ARI JFancybox" plugin doesn't work with image maps.

Regards,  
ARI Soft
