
ari jtabview stopped working when I moved site

Posted by agenius - 2012/05/12 17:12

i have joomla 2.5 with arismartcontent and jtabview enabled. I moved the site from a sub folder to the root and all seems fine but this plugin isn't working now. any ideas on what to check? I tried uninstall, renamed directory to uninstall and reinstall, however it still picks up the right category id, so I'm not sure I got all of it uninstalled when I did that.

What can I check to make it work again. The content is there and style but the click on tab and rotation is not working at all.

Thanks'

is there a rotation banner management that I can use with ari smart content jtabview? I had js conflicts with another one I tried. I need something that can rotate banners from the joomla banner management system.

Thanks

Could you provide a link to a page where we can see the problem?

Regards,
ARI Soft
