
SOLVED-old SQL query not working under new set-up

Posted by snoeby - 2012/06/08 22:29

On one website I'm still using Joomla 1.5.26 and ARI Smart Content 1.7.5 (I know, quite old set-up, but for various reasons I haven't updated that site in the past. I am now considering doing so. For that purpose I have created a mirror of the site and database on a localhost. I have Joomla 2.5.4 and ARI Smart Content 1.8.1. installed.

On the old site I am using the following sql query combined with the table sorter:

```
{arijtablesorter defaultSorting="1:ASC" zebra=1 notSortableCols="0,3"}
{arisqltable}
  {arisqltablecolumns}
    {arisqltablecolumn id="cb_profil" alias="Profil" width="10%"}
    {arisqltablecolumn id="lastname" alias="Nachname"}
    {arisqltablecolumn id="firstname" alias="Vorname"}
    {arisqltablecolumn id="cb_wohnort" alias="Ort"}
    {arisqltablecolumn id="cb_lizenznummer" alias="Lizenz"}
    {arisqltablecolumn id="cb_fispunkteliste" alias="Resultate"}
  {/arisqltablecolumn}
{/arisqltablecolumns}
{arisqltablequery}
SELECT cb_profil AS Profil, concat (lastname, ' ', firstname) AS Name, cb_wohnort AS Wohnort, cb_lizenznummer AS
Lizenz, cb_fispunkteliste AS Resultate
FROM jos_comprofiler
WHERE (cb_lizenznummer NOT LIKE "") and (cb_lizenznummer NOT LIKE "keine FIS-Lizenz") and
cb_fislizenzstatus1011 NOT LIKE "keine mehr"
ORDER BY lastname
{/arisqltablequery}
{/arisqltable}
{/arijtablesorter}
```

This works perfectly on the old site. However, on the new installation it won't show anything (i.e. white page without any data). Is there anything I have to add because the format has changed since ARI Smart Content 1.7.5?

=====

Re:SOLVED-old SQL query not working under new set-up

Solved this one. It had nothing to do with Ari Smart Content. There was an error in the database. Ari Smart Content works also on the new set-up - as usual! Still love that component! It really helps us a lot in presenting lists such as memberlists etc.
