
CSV table: incapable of hiding a column

Posted by bibi2 - 2012/07/23 13:55

Hi

I'm using Ari CSV Table wrapped in Ari JData table and I can't find how to hide a column. I know i'm supposed to add `Â«Hidden="true"Â»` to the code of this column, but it doesn't work for me...

Also, I can't change the column titles (it doesn't display what I write in column id, in column alias nor the column title in my csv file...)

Finally, is there a way to reduce the size of everything in the table so all the columns fit in the page? Normally I should see 10 of them, including the one I don't want to see, but only 6 columns appear for now :S .

here is my code:

```
{arijdatatable}
{aricsvtable file="/opt/bitnami/apps/joomla/htdocs/images/effectivestats_allcohort_agrandi.csv" cellpadding="3"
cellspacing="1"}
{aricsvtablecolumns}
{aricsvtablecolumn id="SN" alias="SN" width="15" className="idg"}
{aricsvtablecolumn id="TMR" alias="TMR" width="15" headerClassName="head"}
{aricsvtable hidden="true" virtual="true" width="0%" column id="PT" alias="PT" headerClassName="head"}
{aricsvtablecolumn id="PL" alias="Percentvalue" headerClassName="head"}
{aricsvtablecolumn id="MMQV" alias="MMQV" width="15" headerClassName="head"}
{aricsvtablecolumn id="RCS" alias="RCS" width="15" headerClassName="head"}
{aricsvtablecolumn id="MC" alias="MC" width="15" headerClassName="head"}
{aricsvtablecolumn id="CS" alias="CS" width="15" headerClassName="head"}
{aricsvtablecolumn id="CS HQ" alias="CS HQ" width="15" headerClassName="head"}
{aricsvtablecolumn id="MC HMQV" alias="MC HMQV" width="15" headerClassName="head"}
{/aricsvtablecolumn}
{/aricsvtablecolumns}
{/aricsvtable}
{/arijdatatable}
```

(column PT is the one I don't want to hide)

I join the table I obtain and the source file so you can tell me what I do wrong.

thank you very much, you do an amazing job!

Hello,

Use the next plugin code:

```
{arijdatatable}
{aricsvtable file="/opt/bitnami/apps/joomla/htdocs/images/effectivestats_allcohort_agrandi.csv" cellpadding="3"
cellspacing="1"}
{aricsvtablecolumns}
{aricsvtablecolumn id="SN" width="15" className="idg"}{/aricsvtablecolumn}
{aricsvtablecolumn id="TMR" width="15" headerClassName="head"}{/aricsvtablecolumn}
{aricsvtablecolumn id="percentValue" alias="PL" headerClassName="head"}{/aricsvtablecolumn}
{aricsvtablecolumn id="MMQV" width="15" headerClassName="head"}{/aricsvtablecolumn}
{aricsvtablecolumn id="RCS" width="15" headerClassName="head"}{/aricsvtablecolumn}
{aricsvtablecolumn id="MC" width="15" headerClassName="head"}{/aricsvtablecolumn}
{aricsvtablecolumn id="CS" width="15" headerClassName="head"}{/aricsvtablecolumn}
```

```
{aricsvtablecolumn id="CS HQ" width="15" headerClassName="head"}{/aricsvtablecolumn}
{aricsvtablecolumn id="MC HMQV" width="15" headerClassName="head"}
{/aricsvtablecolumn}
{aricsvtable hidden="true" id="PT"}{/aricsvtablecolumn}
{/aricsvtablecolumns}
{/aricsvtable}
{/arijdatatable}
```

Regards,
ARI Soft

ok, I understand how to create the code now.

but the column I want to hide still appears :(

bibi2

p.s. thanks for such a fast answer!
