
Link to a tab in JTabView plugin

Posted by elit - 2012/09/13 14:55

We have a page with 4 tabs.

From a different page, can you link to that page specifying a specific tab?

We don't want to link to an article directly, but would rather link to the JTabView page with the proper tab highlighted.

Is this possible?

Thank you,

- Eli

Hello,

Currently the plugin doesn't support this ability.

Hello!

I'm working with Eli on this issue at the moment. We're looking in to the best / cleanest solution to allow user to view a specific tab.

Is it possible to have jTabView only display a specific article ID, instead of all articles in a category? I thought that articleSecId would be the solution, but I appear to be having difficulty getting it to work.

Here is what I tried:

```
{arijtabview height="455" width="960" useJoomlaArticle="true" articleSortField="created" articleItemCount="1"
articleSecId="131"}
{/arijtabview}
```

This does not appear to work. Currently, I'm duplicating the existing article so that I can throw it in to a different Category and then just using the articleCatId instead. This is a little messy and requires a few additional steps, which will require us to update two articles each time we need to update the help pages.

Any help would be appreciated, thank you.

Hello,

Download and upgrade the extension. After this use the following code:

```
{arijtabview height="455" width="960" useJoomlaArticle="true" articleSortField="created" includedArticle="ARTICLE_ID"
articleCatId="9999999"}
{/arijtabview}
```

Just replace ARTICLE_ID with ID of the article which you want to load.
