
Parameters from URL to where clause (arisqltable)

Posted by benbet - 2010/02/11 16:25

Hi,

How to pass parameters in the "WHERE" clause (arisqltable) from the url?

I can create URLs with arisqltable and concat but I don't know how to use the parameters of the URL with arisqltable ...

Do you help me?

Thank you

Hello,

Unfortunately now 'ARI SQL Table' plugin doesn't provide this possibility, but you can use DirectPHP extension for this purpose. This extension provides ability to use PHP commands inside Joomla! content pages. In you case, you can try the following code snippet with DirectPHP extension:

```
{arisqltable}
  {arisqltablequery}
SELECT id AS ID,name AS NAME
FROM jos_users
WHERE name LIKE
  {/arisqltablequery}
{/arisqltable}
```

Regards,
ARI Soft

Wonderful !! :woohoo:

It's works.

Thank you very much !!!
