## Where do I start?

Posted by motombo - 2012/10/26 20:05

---

I have purchased com\_arismartcontent. For 4 weeks I haven't been able to get this to work. I am not a developer and I know very little on SQL. I was hoping to get a tool with a gui interface where it will be easy to set up. I have tried to use the code for Data Table by copying and paste in an article contain but it doesn't work. Can some one please tell me where and how to use Ari code?

Thank you

Hello,

Could you specify what plugin code do you use and provide a link to a page where we can see the problem?

Thank you for your fast response

I am currently trying to use ARI SQL Table

I see a Usage code in it but I don't know what to do with. I have tried to modify it and put in an article didn't work. Here is an example.

How can I get a table containing:

ID, Name, address from table person?

Knowing my:

database name = joo\_data

Bd username = admin

db password = adminpass

How is this going to fit in your code? where will I use the code?

I have been working on this for 4 weeks.

Thank you.

If something doesn't work, you can contact us and we will be glad to help.

If you want to show data from "person" table from Joomla! database, use the following plugin code:

```
{arisltable}
{arisltablequery}
  SELECT ID, Name, address FROM person
{/arisltablequery}
{/arisltable}
```

Thank you for Your help. I should have asked for help long time ago.  
Now when you get the code like you jus did, where do you pu it to get it work?  
I and a Joomla article? Just copy and paste?

I really appreciate this fast support.

---

Yes, you can place it into an article or any other content where you want to show a table.

PS: If you use a WYSIWYG editor, switch it to plain text mode before inserting plugin code because WYSIWYG editors can add extra HTML code in design mode.
