Need some example code for table

Posted by patcain - 2012/12/03 05:08

_____

Can you give me the code that generated the table example at http://smart.ari-soft.com/ari-jcsv2table.html

I would like to create a table with cell outlines and be able to define column widths. One more nice thing would be to use shading behind every other line.

Thanks for any help.

_____

Hello,

For example if CSV file is located by /data/report.csv path, use the following plugin code:

```
{arijcsv2table url="data/report.csv"}
{/arijcsv2table}
```

It is also possible to use "ARI CSV Table" plugin with "ARI JDataTable" plugin, see example #2 here. Plugin code will look like:

```
{arijdatatable}
  {aricsvtable file="data/report.csv"}
  {/aricsvtable}
{/arijdatatable}
```

Regards,
ARI Soft
