Searching literal strings
Posted by plaurent - 2013/01/14 11:10

_____

I've not been able to search for literal strings, in other words, using "Session 1" in my search criteria in order to find records that explicitly match 'Session 1'. Right now, a search for "Session 1" returns all record rows containing 'Session' and '1' in any of the fields, which contains a larger subset of returned rows than desired.

Any hints?

_____

Hello,

The extension doesn't support search in the described way.

Regards,
ARI Soft
