ARI CSV Table Column creating

Posted by ooinsaneoo - 2013/01/16 23:02

_____

Good day,

my name is Daniel and I am from Germany so first of all please pardon faults in grammar.

I have created an .csv file with "Apple Numbers" to load it onto my page with ARI CSV table. 3 Columns, everything is fine.

The integration of the code snippet from the example page works in that way that my .csv data is displayed correct BUT the plugin seems to ignore that i had created 3 columns.

The plugin creates only one column and puts everything from my three created columns only in one column seperated with an ";".

It would very nice if anyone could explain me where i did something wrong or could give me an example code snippet to get 3 columns correctly displayed.

I am not a n00b in creating websites but i really don`t understand the system behind the plugin.

The System is Joomla 2.5.8, RocketTheme template and K2 plugin for articles.

Thanks in advance.

Daniel

_____

Hello,

If you want to use ; as separator, open "Components -> ARI Smart Content -> Plugins -> ARI CSV Table" plugin settings page and set "Delimiter" parameter to ; value or add delimiter=";" attribute to {aricsvtable} tag.

Regards,
ARI Soft
