## Smart Content Files recognized as \'Schadcode\'

Posted by mniederm - 2013/01/31 12:14

---

Hello,

our provider domainfactory (<http://www.df.eu/at/>) classified today the ARI Code as 'Schadcode' and due to these facts he closed our domain (<http://www.aktionsfinder.at>) for some time.

After some discussion he opened it again but told us that the scanner recognised your code, in all of your files as schadcode

I know that you build up your files this way that nobody can copy your code. But how is it possible to assure the provider that the code is no schadcode ???

Thanks for your answer  
Michael

Hello,

It seems you use old version of the extension. Upgrade it to the latest version.
