Hello,

Switch a WYSIWYG editor to plain text mode and then insert plugin and HTML code. If you use plugin not in an article, set "All components" parameter to "Yes" in "System - ARI Smart Content" plugin settings.

If it doesn't help, provide a link to a page where we can see the problem.

Regards,
ARI Soft

hi admin thanks for reply ...now every thing is worked out but i have question if i changed the configuration and set all components to yes can i use the smart content on module ??? imean what is the difference between using smart content in articles and modules ?
and what is components means in the basic options of smart content plugin

Hello,

The extensions works only in articles by default, but if "All components" parameter is set to "Yes", it is possible to use the plugins in any content (including modules).
