
problem with character encoding

Posted by mohanned2012 - 2013/02/18 10:27

hi..i am using smart content to show tables the problem now the title of the columns in arabic language and its appears like diamonds shapes with question marks ...when i change the encoding to arabic windows 1256 in browser the problem is solved but every thing else on the page turned to rubbish ...any help appreciated

Hello,

What plugin code do you use?

that is my code i am using

```
{arijdatatable} {aricsvtable file="tables/table_test.csv"} {aricsvtablecolumns} {aricsvtablecolumn id="ID" alias="ID" width="10%" className="idg"} {aricsvtablecolumn id="NAME" alias="UserName" headerClassName="head"} {aricsvtablecolumn alias="Virtual Column" headerClassName="head" virtual="true" pos="1"} {coltemplate} - {$ID}/{coltemplate} {/aricsvtablecolumn} {/aricsvtablecolumns} {/aricsvtable} {/arijdatatable}
```

This problem occurs because your CSV file is saved in non-UTF8 encoding. Use "inputEncoding" attribute of "aricsvtable" tag to specify encoding of the CSV file or use OpenOffice or NotePad++ application to save the file in UTF-8 encoding.

Specify encoding of your CSV file in the attribute. For example if windows-1251 encoding is used in your file, add inputEncoding="windows-1251" attribute to {aricsvtable} tag.

PS: If you send your CSV file by email, we will help to find appropriate value for "inputEncoding" attribute.
