INNER Join not working

Posted by 1StopWebco - 2013/07/01 01:51

_____

First let me state I am new to SQL so i presume this is going to be a user error vs. a problem with your product, which I love. I am trying to create a simple join where I join two columns from my product table and the price from my pricing table. This is what I am trying to use:

SELECT eif7g_hikashop_product.product_name, eif7g_hikashop_product.product_description,
eif7g_hikashop_price.price_value
FROM
eif7g_hikashop_product
INNER JOIN eif7g_hikashop_price
ON eif7g_hikashop_product.product_id = eif7g_hikashop_price.product_id

Can one of your experts help this novice please.

Thanks.

_____

Hello,

Could you send SQL dump of eif7g_hikashop_price and eif7g_hikashop_product tables by email so we can investigate the problem?

PS: SQL dump can be created in database tool like PHPMyAdmin which is usually available in hosting panel.

Regards,
ARI Soft

_____

Use the following SQL query:

SELECT
 P.product_name,
 P.product_description,
 PR.price_value
FROM
 #__hikashop_product P INNER JOIN #__hikashop_price PR
   ON P.product_id = PR.price_product_id

Regards,
ARI Soft
