## Smart Content in EasyBlog Articles

Posted by DealTheNuts - 2013/07/05 12:38

---

I wanted to check before buying Smart Content if Tabs and/or Tables work in EasyBlog articles and are responsive?

I am using JA Mitius template with Joomla 3.1.1 and only use Easyblog for articles.

Hello,

"ARI Smart Content" works with Joomla! 3.1 and you can use it in any content.

Table plugins are not responsive. For accordion it is possible to set width in percent.

---

I downloaded Smart Content and installed it on Joomla 3.1.1 without and problems.

I added com\_easyblog to the component section of basic options in the Smart Content Plugin.

I looked at the Smart Content Component, JTabView section, but am not sure of the next step.

If I wish to add a tab or tabs to an EasyBlog article, what do I need to do next?

---

Add a plugin code for the plugin which you want to use into an article. For example if you want to add tabs to an article, add the following plugin code to the article:

```
{arijtabview rotate="2000" selected="1" fx="fade_slide"}
{arijtab title="Tab 1"}
  tab 1.
{/arijtab}
{arijtab title="Tab2"}
  tab 2
{/arijtab}
{arijtab title="Section 3"}
  tab 3.
{/arijtab}
{/arijtabview}
```

---

PS: If you use a WYSIWYG editor, switch to plain text mode before inserting plugin code because WYSIWYG editors can change code in design mode.

Thank you for the reply.

I added the example code in your post to an EasyBlog article as well as a sample Joomla article (just in case it was an Easyblog problem) but the code remains as visible code in the article, not tabs.

Is there something else I should do?

I am using JCK Editor.

Open "System - ARI Smart Content" plugin settings and set "All components" parameter to "Yes".

PS: If it doesn't help, could you provide a link to a page where we can see the problem?

---

Thank you, it is now working in both Joomla and EasyBlog.

I went back and changed the system setting to No with com\_content and com\_easyblog and everything is working using those parameters as well.

First class support, much appreciated!

I forgot to ask one other question, where do I get the various tab themes in the demo?

You are welcome.

Active theme can be selected in "ARI Smart Content -> Plugins -> ARI JQuery UI Loader" plugin settings. See "Default jQuery UI 1.5.2 theme" parameter.
