
is there a step by step how to ?

Posted by econnect - 2010/05/14 17:01

I still can't figure out how to use this product.

(see the easy slider thread),

the concept of smart content totally escape to me.

For instance the "tooltip plugin":

is this global script that transform all Title from a href into specific info bubble ?

Thank you

Each plugin from 'ARI Smart Content' contains examples of usage and description of all available parameters. You can find it in 'Description' field on plugin settings page or on our demo site. For example, if you want to show tooltip with text 'Tooltip text' when a user move mouse over 'Element with tooltip' text, place the following code into an article or 'ARI Smart Content' module:

```
{arijtooltip title="Tooltip title" tooltip="Tooltip text" delay="100" extraClass="fancy pretty"}  
Element with tooltip  
{/arijtooltip}
```

If you want to use plugins in other place, you can install 'System - ARI Smart Content' plugin instead of 'ARI Smart Content' content Joomla! plugin. This plugin is available on ARI Smart Content page on F.A.Q. tab. 'ARI JTooltip' doesn't create tooltips for all links on a page, it replaces {arijtooltip} tag in Joomla! content with necessary tooltip.

Regards,
ARI Soft
