
JDIALOG- how to get IE10 overlay opacity working

Posted by johntmcii - 2013/07/15 16:05

In JDIALOG, the overlay opacity parameter works fine in Chrome, Firefox, and IE 8 and 9; however, in IE 10, it does not work (the overlay is solid with no transparency)-- any suggestions?

Hello,

Create a new CSS template in "CSS Templates" section on component backend, enable it and place the following code to created template:

```
.ui-dialog-overlay {opacity:0.5 !important}
```

Regards,
ARI Soft
