## Column width in a Table

Posted by avilovi - 2013/07/16 10:30

---

Hello,

I cannot find how to change the column width in a table. The syntax I use doesn't help:

```
{arijdatatable}  
{aricsvtable file="/images/cars_utf8.csv"}  
{aricsvtablecolumns}  
{aricsvtablecolumn id="TITLE" alias="Title" width="20%" headerClassName="head"}  
{aricsvtablecolumn id="SERVICE" alias="Service" width="50%" headerClassName="head"}  
{aricsvtablecolumn id="CONTACT" alias="Contact" width="30%" headerClassName="head"}  
{/aricsvtablecolumn}  
{/aricsvtablecolumns}  
{/aricsvtable}  
{/arijdatatable}
```

Thank you in advance for your help,  
Igor.

Hello,

Columns width can be defined for a plain HTML table, "ARI JDataTable" plugin calculates columns width automatically.

Regards,  
ARI Soft
