\"Uncaught TypeError\" with arijtablesorter

Posted by saumitra.agarwal@gmail.co - 2013/08/31 08:23
_____

I am trying to show nicely formatted sql data on my website. The data is coming but it is not sortable and I am getting this error during debug:

Uncaught TypeError: Object has no method 'tablesorter'

Here is a link to my page:
http://livestock.cloudaccess.net/nse-breadth-index.html

and here is the code I'm using:

```
{arijtablesorter zebra="true" debug="true"}
  {arisqltable}
    {arisqltablecolumns}
      {arisqltablecolumn id="symbol" alias="NSE Symbol" width="30%"}
      {/arisqltablecolumn}
      {arisqltablecolumn id="close" alias="Closing Price" width="70%"}
      {/arisqltablecolumn}
      {/arisqltablecolumn}
    {/arisqltablecolumns}
    {arisqltablequery}
      SELECT symbol, close FROM EQDatabase WHERE timestamp = (select timestamp from EQDatabase where
symbol like 'RELIANCE' order by timestamp desc limit 1,1)
    {/arisqltablequery}
  {/arisqltable}
{/arijtablesorter}
```

Please help

_____

Hello,

Download and upgrade the extension. It should help.

Regards,
ARI Soft

_____

I just did but I am getting the same error.

I'm on Joomla 3 with Protostar template if that makes any difference?

I am trying to upgrade from Art lite to Ari but finding it difficult. Please look at this page. I have both the Artlite and Ari extensions on the same page. The Ari table is not sortable and throwing the error I in debug.

_____

I downloaded the latest version 'ARI Smart Content v. 1.9.3' from here:

http://www.ari-soft.com/component/option,com_arimanager/Itemid,52/

Is there a newer version available?

_____

Hi,

Now I am getting the following error with arijdatatable:

Uncaught TypeError: Object has no method 'dataTable'

Here is the link to my page. I have already updated the site with the latest available plugin today.
http://livestock.cloudaccess.net/144-domestic-consumption-returns-highest-2.html

Please help.
