

CSV Tables

Posted by Nadia - 2013/10/14 11:03

Hi,

I need help customizing the csv tables. There was a couple of issues I had, maybe you have the solution for it.

1. Special characters in uploaded csv table show as ?

Is there a way to automatically convert these into a format that is understood by the browser without having to edit it manually on the csv tables before uploading?

2. I need to have the first x amount of rows of the tables as headings, and these headings need to be excluded from the hover row/cell state. (see example table on website: [example](#)).

At the moment my css is as follows, but the hover seems to override the first 3 rows...:

```
TABLE.table-sport-odds {  
    font-size: 1em;  
    background-color: #f2efef;  
    color: #000;  
}
```

```
TABLE.table-sport-odds .actRow_0 {  
    font-size: 1em !important;  
    font-weight: bold !important;  
    background-color: #D32626 !important;  
    color: #fff !important;  
}
```

```
TABLE.table-sport-odds .actRow_1 {  
    font-size: 0.813em !important;  
    font-weight: bold !important;  
    background-color: #EF4343 !important;  
    color: #fff !important;  
}
```

```
TABLE.table-sport-odds .actRow_2 {  
    font-size: 0.813em !important;  
    font-weight: bold !important;  
    background-color: #EF4343 !important;  
    color: #fff !important;  
}
```

```
TABLE.table-sport-odds td, th {  
    text-align: center;  
    border: 1px solid #fff;  
    padding: .2em 5px;  
    font-size: 0.813em;  
}
```

```
/* Table 0 Column Red */
```

```
TABLE.table-sport-odds .actCell_0 { font-size: 0.813em; background-color: #EF4343; color: #fff; }
```

```
/* Hover Row */
```

```
TABLE.table-sport-odds tr:hover td {  
    background-color: #c4b6b6;  
}
```

Hope you can help,

Thanks,
Nadia

Hello,

1. Save CSV file in UTF-8 encoding or specify file encoding using "inputEncoding" parameter of {aricsvtable} tag.
2. Add the following CSS rules:

```
TABLE.table-sport-odds tr.actRow_1:hover td,
TABLE.table-sport-odds tr.actRow_2:hover td {
    background-color: #EF4343;
}
```

Hello,

Thank you for the quick response!

The CSS worked brilliantly, thank you very much.

I am still having issues with the UTF-8 encoding. I entered it in the Parameters section 'Input Encoding' as UTF-8, refreshed the page and I am still getting the ?. see example

Kind Regards,
Nadia

If you file is saved in UTF-8 encoding, it doesn't require to use "inputEncoding" parameter. In other case enter encoding which is used in your file in "inputEncoding" parameter.

Hi,

I have tested this several times now and it is not working. I saved the file as CSV (comma delimited) in UTF-8 encoding, uploaded it and I am still seeing the question marks on the front end.

I tried entering UTF-8 Input Encoding, that didn't change anything.

Hello,

Just emailed you the CSV file.

Kind Regards,
Nadia

Your file in ISO-8859-1 encoding. It is not UTF-8 encoding.

Hello,

That is strange, I followed the steps on this website.

I went to save as, then web options, encoding, save this document as: Unicode (UTF-8), then it saves....
Not sure why it then appears to not be UTF-8.

You can use OpenOffice application to work with CSV file.

Currently set inputEncoding parameter to ISO-8859-1 value.

Hi,

Thank you that worked for now. Unfortunately all the local managers of the websites are using excel as well, so it would have to be done through that. Is it possible to enter several different inputEncoding parameters?

Kind Regards,
Nadia

Use "inputEncoding" attribute of {aricsvtable} tag to specify encoding of CSV file. It is possible to specify different encoding for each {aricsvtable} tag.
