## ARI Smart Content: ARI CSV Table plugin

Posted by AKG73 - 2013/11/19 17:52

---

Greetings!

I use Gantry framework and try to understand how I can customize tables by means of ARI CSV Table plugin. The main problem is that only one line working: this one `{aricsvtable file="data.csv"}`. Others - not!  
If I apply constructions like example all page crushed after that. Separate lines with command like these `{aricsvtablecolumnspan}` or `{aricsvtablecolumns}` don't affecting anyway.  
If you have any ideas for this trouble it is very much appreciated.

Thanks in advance.

Hello,

Could you specify what plugin code do you try to use and provide a link to a page where we can see the problem? If it is private, you can send it by email.

Greetings dear friend!

Thanks for the prompt response.  
The result should be approximately as in the attached file .  
The working line is `{aricsvtable file="docs/ma/ma-australia-notes.csv" className="table-hover"}`  
(.table-hover is gantry framework optional class)  
The site is on local host still. I have no opportunity in short period load it unfortunately.  
If you don't mind I'll send screenshots via e-mail.

Best Regards.

P.S. It seems the plugins set ARI Smart Content doesn't compatible with K2 component. Am I right?

Sorry, but we can't investigate the problem by screenshots. One note, if you use several "ARI CSV Table" plugins on one page, use closed tag for them. It means use the following code:

```
{aricsvtable file="docs/ma/ma-australia-notes.csv" className="table-hover"}/{aricsvtable}
```

instead of:

```
{aricsvtable file="docs/ma/ma-australia-notes.csv" className="table-hover"}
```

If you want to use the plugin in any content (for example in K2 items), not only in articles, open "System - ARI Smart Content" plugin settings page and set "All components" parameter to "Yes".
