
[SOLVED] ari data table not working on K2 item

Posted by rscampanero - 2013/12/04 02:40

arijtable not working on my k2 item and extra field.

Code:

```
{arijdatatable} {aricsvtable file="testcsv/Book1.csv"} {aricsvtablecolumns} {aricsvtablecolumn id="Currency"
alias="Currency" headerClassName="price" className="price"} {/aricsvtablecolumn} {aricsvtablecolumn id="Retail"
alias="Retail Price"} {/aricsvtablecolumn} {aricsvtablecolumn id="Wholesale" alias="Wholesale Price"}
{/aricsvtablecolumn} {/aricsvtablecolumns} {/aricsvtable} {/arijdatatable}
```

Hello,

Open "System - ARI Smart Content" plugin settings and set "All components" parameter to "Yes".

Regards,
ARI Soft

Where is it exactly?

Im using joomla 2.5.16

What i have inside the ARI component was plugins, css template, languages, diagnostics, help and FAQ.

I have activated all plugins inside the Plugins Tab.

I still have the same error with K2 item.

<http://www.raspharma.com/products/laboratory-use/item/54-trimming-knife.html>

But to check whether it is functioning outside K2, i created a joomla article with the same codes:

<http://www.raspharma.com/career/test-page.html>

and it works... except on inside K2

thank you i manage to see what you're telling me...

Extensions > Plugin Manager > System - ARI Smart Content

Edit and on Basic Option = choose "YES" to "All Component"
and it works!

whew... thank you so much...
