## Themes - No Options

Posted by shamrockllc - 2014/01/05 03:00

---

I am having trouble finding where I can change the theme of my Data Table. I would like to use UI smoothness (and soon use the builder to design my own that will better fit my site).

You can see it in action here. The default theme seems to be working, but I have no other options.

demo page

Also, can you let me know why my jDialogue is not rending correctly. It seems to have competing stylesheets working. You can see it by clicking the data sheet link in the data table.

Thanks in advance.

Hello,

Use "Default jQuery UI 1.7.2 theme" parameter in "ARI Smart Content -> Plugins -> ARI JQuery UI Loader" plugin settings to change theme of "ARI JDataTable".

About the problem with dialog, this is conflict with styles. Create a CSS template in "ARI Smart Content -> CSS Templates" section and populate it with the following content:

```
BODY .ui-dialog .ui-dialog-title
```

```
{  
  float: none;  
}
```

```
BODY .ui-dialog .ui-dialog-titlebar-close span
```

```
{  
  display: none;  
}
```

Regards,  
ARI Soft

Both issues resolved.

Can you also tell me where I upload my custom theme one I build it in the generator?

"ARI JDataTable" plugin supports jQuery UI styles and it is possible to generate your own theme on jQuery UI site, download it, unzip theme package, open 'css/custom-theme' folder and rename it to new theme name, for example 'mytheme' and then rename jquery-ui-1.7.2.custom.css CSS file in this folder to mytheme.css. After this copy 'mytheme' folder to 'plugins/content/arismartcontent/system/ari\_jquery\_ui\_/js/1.7.2/themes/' folder on your server. Now you can see new theme in 'ARI JQuery UI Loader' plugin settings.

Regards,
