ARI SmartContent:DataTable Pack, Sorting Date

Posted by chicok40313 - 2014/04/18 17:11

_____

Hallo,
I tried to make my table sorting by german date, but it doesn`t work.
http://wmt.knobosoft.de/index.php/tests
For example {arijtablesorter sorters="N0:ipAddress,N1:text,N2:shortDate"} ...
I looked at the post #36244 at this forum and it works on the specified url in that post.
So i assume there is a fault in my code or I bought the wrong extention for use in Joomla 3.

Please can you give me a hint.

Regards
chico40313

_____

Hello,

Add sorters="2:shortDate" parameter to {arijtablesorter} tag. It will look like:

{arijtablesorter sorters="2:shortDate"}

...
{/arijtablesorter}

Regards,
ARI Soft

_____

Hello,

thanks for the fast reply.
I changed tag to
{arijtablesorter sorters="2:shortDate"}

...
{/arijtablesorter}
as you proposed, but the sorting order ist still incorrect.
The month is not taken into account.

I hope you have another hint for me.

Regards
chico40313

_____

Check that you use the latest version of the extension and add also dateFormat="uk" parameter to {arijtablesorter} tag.

_____

Thank you, that works fine!

Now I tried to get it work with {arijdatatable}, but I don't find the appropriate parameters, because only bSort:True/false is available. I tried something like this
{arijdatatable
dateFormate="uk"}
...
{/arijdatatable}
or
{arijdatatable}
{arijtablesorter sorters="2:shortDate" dateFormat="uk"}
...
{/arijtablesorter}
{/arijdatatable}
but nothing is working correct.

Can you help me again?

Regards

_____

"ARI JDataTable" doesn't support these parameters.
