
How to use an external database

Posted by jjmm - 2014/08/24 07:20

My configuration:

Joomla 3.3

ARI Smart Content

This works on joomla:

```
{source}
```

```
{/source}
```

How can I use the table in the follow code:

```
{source}
```

```
{arijdatatable bPaginate="true"}
```

```
{arisqltable}
```

```
{arisqltablequery}
```

```
    SELECT `name`, `texto` FROM `menu` WHERE `name` = 'company' ORDER BY texto
```

```
{/arisqltablequery}
```

```
{/arisqltable}
```

```
{/arijdatatable}
```

```
{/source}
```

Thanks in advance?

JM

Use the following code:

```
{arijdatatable bPaginate="true"}
```

```
{arisqltable}
```

```
{ariconnectionstring dbHost="localhost" dbUser="user" dbPass="pass" dbName="joomla"
```

```
dbType="mssql"){/ariconnectionstring}
```

```
{arisqltablequery}Reports 'rcStats', 'BCN'{/arisqltablequery}
```

```
{/arisqltable}
```

```
{/arijdatatable}
```

Just specify correct connection parameters in attributes of {ariconnectionstring} tag.

Regards,

ARI Soft

The code is not showing anything. No error. Nothing.
Instead of the procedure "EXEC Reports 'rcStats', 'BCN'", I tried with a vary simple select but nothing appears.

What can be the reason of that?

Probably an incorrect connection parameters are used.

There aren't anything wrong in the ariconnectionstring related with username, password I already check.

Can be anything related with microsoft sql driver?

Could you provide a link to a page where the problem occurs and a temporary access to J! backend by email so we can investigate the problem?

Try now. An incorrect code was used. Attributes of {ariconnectionstring} tag were used outside the tag, unnecessary HTML code was in plugin code and unnecessary {source} and {/source} tags were used around the plugin code.
