
ARI JDATA Table/ARI CSV Table - Changing csv-file

Posted by dietbox - 2010/06/29 06:20

Hello ARI-Team,
with this simple Code:

```
{arijdatatable}  
{aricsvtable file="images/TCR2010/Mitgliederliste/Mitgliederliste.csv" inputEncoding="CP1250" }  
{aricsvtablecolumns}  
  {aricsvtablecolumn id="Telefon 1" alias="Telefon"}  
  {aricsvtablecolumn}  
{/aricsvtablecolumns}  
{/aricsvtable}  
{/arijdatatable}
```

I posted an article with a memberlist of 305 rows in the enclosed csv-File. All worked fine!

When I replaced the .csv-File with an actual one (306 rows), I got a blank page. With step-by-step reducing the number of lines, I found out, that it works fine again until 301 rows. One row more and I got the blank page again.

What can I do? Is there any restriction to 301 rows??? - I can't believe, because at the beginning it worked.
Is there anything special, I have to do, when changing the .csv-file?

Hope You can help me
Regards
dietbox

Hello,

It can occur due to memory limit is exhausted. Try to install PHP Settings plugin that increase 'memory_limit' PHP setting.

Regards,
ARI Soft
