## Tabs: Auto Scrolling

Posted by dirmel - 2014/10/09 07:34

---

Hi!

ARI Smart Content "Tabs" plugin

When you click on a active tab again, there is a scrolling effect: The content of the tab scrolls to the top of the browser window.

You can see it on my website ([www.ssv-ueberherrn.de](http://www.ssv-ueberherrn.de)) when you klick on the tab named "heute" in the left sidebar.

I don't like this effect. How can i prevent it?

Regards from Germany  
dirmel

Hello,

What browser do you use? We don't see auto scrolling in FireFox browser.

Hello again!

I tested it. The scroll effect appears with all browsers (IE, FF, Chrome, Maxthon, also on Mobiles...)

The effect only appears when no tab is active and you click on a tab or when you click on an active tab (a second time).

Then the whole website goes with the top of the tab-content to the top of the browser window...

Hello,

This effect is not added by "Tabs" application, it seems a javascript conflict occurs so this effect appears. Probably with "slideshowx" plugin. Could you provide a temporary access to your J! backend by email so we can investigate the problem in more details?

The scrolling issue appears due to a javascript conflict. You can see a lot of javascript errors in browser's error console (press F12 into most modern browsers). These errors are not happen in "ARI Smart Content" javascript code, but they affected on functionality of "Tabs" application from "ARI Smart Content".

Regards,

ARI Soft
