
Plugin not working in an iframe

Posted by ccvortex - 2014/10/15 00:11

Greetings, I was wondering how I can get the plugin to recognize the {arjtablesorter defaultSorting="0:ASC"} tag when it's in an html doc that is being loaded in an iframe on my Joomla site. Possible?
Thanks!

Hello,

Do you load into a Joomla! page?

No, I was loading an external html file that I created and uploaded to the root dir of my Joomla site. The html file contained only an Ari Table.

It is not possible because it is not a Joomla! page.

OK, thanks, so the only way would be to load the iframe with another Joomla page with the Ari table in it?

You can create a new article, add "ARI Table" plugin to it and show the article into . If you want to hide header, footer and other elements, add tmpl=component request parameter to page URL.
