
Is there any limitations when using CSV for data?

Posted by irwin - 2014/12/14 15:20

Hi.

I seemed to have hit a wall. I have been creating numerous ARI data table modules. Somehow it seems I am no longer able to link the module to the csv data any more. I clicked on the link, but it does not seem to select and the box was not able to close automatically as before. Are there any limitations? What should I do?

Regards,
Irwin

I realised the problem. I had used apostrophe in the naming of the data title (e.g. People's Park instead of Peoples Park). So it's solved now.

Anyway, I would like to know if there are any limits to the number of people accessing the data on the same CSV file at the same time?

Thank you.

Hello,

The extension doesn't define this limit. It only depends on capacity and configuration of your server.

Regards,
ARI Soft
