
Use fancybox in Chronoforms

Posted by stephanbeek - 2015/01/24 13:11

I use Chronoforms to get and display data driven information to my users.
I want to use fancybox to display links in these forms that open lightbox windows.
Fancybox works ok when I use it in an Joomla article, but nothing happens when I use it in Chronoforms.

If I make a very simple Chronoforms with just 1 Custom Code event with this code:

then the output is:

```
{fancybox url="images/pdf/factuur_20140224.pdf" width="700" height="500"}fancybox pdf file{/fancybox}
```

So the fancybox plugin does not work here, I do not get a working link.

Other lightbox plugins (eg modals by nonumber) work fine in Chronoforms.

Can you fix this?

Regards
Stephan

Hello,

Open "Components -> ARI Smart Content -> Config" page on Joomla! backend, open "Plugins settings" tab, set "Run plugins anywhere" parameter to "Yes" value and save config.

Regards,
ARI Soft

B) That's easy. Thanks for your fast reply. Did not find this in the help pages of the extension.

Regards
Stephan.
