
Fancybox with title

Posted by stephanbeek - 2015/01/26 13:07

Cannot find this in the documentation, demo site or on this forum:

There is a parameter "titlepos": titlePos is used to override Title position parameter from plugin settings. Possible values: float, inside, outside or over.

But how do I set a title on a modal window with fancybox? The obvious use of a title parameter (eg: {fancybox url="notulen/vbb_bestuur_20150112.pdf" title="Notulen" width="900" height="95%"}Notulen 12 januari 2015{/fancybox}) does not seem to work.

Regards
Stephan

Hello,

Download and upgrade the extension (including "Fancybox" package). It should help.

Regards,
ARI Soft

You are right. Works in this version.

Some things are strange though:

I ordered and got Smart Content only 3 days ago and there is no visual information in the extension that I needed an update.

The documentation in the latest version I installed just now has a changelog upto v. 2.2.0 .

The title parameter for the fancybox plugin is still not documented.

Otherwise: the extension seems to give a lot of good functionality at a fair price ...

When I detect other bugs or things that are missing I will inform you, to make it even better.

Regards
Stephan.

Hi there,

I'm having the same issue with titles not appearing on a newly-installed version of Ari Smart. The version I downloaded last month (Dec 2014) was 2.2.5, and this is the latest I believe?

Here's my code:

```
{fancybox title="title text"}
{link}
Linktext
{/link}
{content}
content text
```

{/content}
{/fancybox}

Basically - no title appears, no matter which titlepos I use. It's not covered in the documentation either. Any help would be greatly appreciated!

Thanks,
Jemma

Hello,

To dsdipcomms: download and upgrade the extension (including "Fancybox" application). It was updated yesterday.

Regards,
ARI Soft

Great thanks - is it still the same version then - 2.2.5? Also, is this a complete uninstall (like upgrading from V1 to V2), or a simpler update?

The latest version is 2.2.6. Upgrade process doesn't require to uninstall previous version. Just install a new version via standard Joomla! installation page.

Regards,
ARI Soft
