## Accordion class definition

Posted by dsdipcomms - 2015/02/04 00:34

---

Hi there,

We have upgraded recently to your latest version and we have noticed that the previous "className=" attribute is no longer supported in the {accordion} plugin, and is not mentioned in the documentation. Is there any way to define a class for an accordion? I've tried "class=" but that doesn't seem to work either. I'm basically trying to change the background colors using css (not the same as any of the existing themes).

Any help would be greatly appreciated.

Thanks in advance,  
Jemma

Hello,

Upgrade the extension to v. 2.2.7 (including "Accordion" application) and use "class" parameter for {accordion} tag.

Regards,  
ARI Soft
