## Nested Controls

Posted by taoh - 2015/02/05 15:15

---

I have created 6 articles each containing HTML table modules which work perfectly.

I created a Text data source containing these 6 articles.

I then built a Tab Module using that text source and placed that in an article.

The correct number of tabs display and the tabs work and show the text from the article BUT the HTML tables don't display

Am I asking too much or have I missed something.

Cheers

Hello,

Do you load tab module into an article or module position? If load tab module via "ARI Smart Content - Load Module" plugin then it is not possible to load content by the plugin recursively.

Regards,

ARI Soft

OK

So I have 6 HTML Table modules that I want to appear in the website as pages of a TAB module, what's the best way of doing it?

I want the Tab module to appear on the main page in the usual Article position.

Thanks

Niall

Upgrade the extension to the latest version (2.2.9) and set "Parse plugin tags" parameter to "Yes" in "Articles" data source settings.

Thanks, I've downloaded it.

What's the BEST way of upgrading?

---

Cheers

Working beautifully.

Thanks

Niall
