
Timezone display in data tables

Posted by zanzibar - 2015/03/17 06:11

Hi there,

I'm currently using: {\$value|date_format:m-d-Y h:i a}

to format the dates coming out of the database in the query settings. However, it's not using the timezone I have set for the site, and is instead showing them in UTC. Is there a way to a) have it use the configured site timezone, or b) specify it in the formatting code above?

Thanks!

Upgrade the extension to v. 2.2.16 and use the following value in "Columns settings -> Format" parameter:

{\$value|date_format:m-d-Y h:i a:1}

Regards,
ARI Soft
