
jQuery conflict using module

Posted by nickc4555 - 2015/03/18 08:36

I'm not sure if this is an Ari Soft or a template problem, but I would be grateful for your advice. The sticky menu on this page stops working when the ARI Smart Content module is published.

Did you check javascript conflict?

I'm assuming that is what the problem is, but I don't have enough knowledge of javascript to fix it.

Hello,

The top menu drop-down menu works fine. We checked it in FireFox browser. Do you mean the menu on top of the page? What browser do you use?

Regards,
ARI Soft

Thanks for your reply. The site has a "sticky" menu that appears when the page is scrolled down about 500px that isn't working when the Smart Content module is published. Also the responsive menu that should be swapped in when the display width is below 908px doesn't work, also only when the Smart Content module is published.

Isn't the table HTML generated by the module? This is my code:

Â Upcoming Shows

```
{arijdatatable} {aristable header="false"} {aristablecolumns} {aristablecolumn id="ticketlink" hidden="true"}
{/aristablecolumn} {aristablecolumn id="gigdate" hidden="true"} {/aristablecolumn} {aristablecolumn id="gigmonth"
hidden="true"} {/aristablecolumn} {aristablecolumn id="gigyear" hidden="true"} {/aristablecolumn} {aristablecolumn
id="gigdate" alias="Date" className="gig_date"} {coltemplate}
{$gigmonth}
{$gigdate}
{$gigyear}
{/coltemplate} {aristablecolumn} {aristablecolumn id="venue" alias="Venue" className="gig_venue"} {coltemplate}Â
{$venue} {/coltemplate} {aristablecolumn} {aristablecolumn id="city" alias="City" className="gig_city"}
{/aristablecolumn} {aristablecolumn id="country" alias="Country" className="gig_country"} {/aristablecolumn}
{/aristablecolumns}
{aristablequery} SELECT date_format(date,'%d') AS gigdate, date_format(date,'%b') AS gigmonth,
date_format(date,'%Y') AS gigyear, venue, ticketlink, city, country FROM #__giglist WHERE date >= curdate() ORDER
BY date {/aristablequery} {/aristable} {arijdatatable}
All shows ...
```

Also, the problem goes away if I remove {arijdatatable} and just use {aristable}.

Re:jQuery conflict using module

Posted by admin - 2015/03/19 16:31

We described why it doesn't work for "ARI JDataTable" plugin. Set header="true" attribute for {aristable} parameter or remove {arijdatatable} tag.

Regards,
ARI Soft
