## Smart Content / Data Table problems

Posted by quigley595 - 2015/04/18 05:47

---

Hi folks,

recently updated FROM:

Joomla 2.5, ARI Smart Content Component 1.9.4, ARI Data Tables Module 1.14.2..... TO  
Joomla 3.4, ARI Smart Content Component 2.2.17, ARI Data Tables Module 1.14.12

In the old site, I had the following code in the "Content" area of a Smart Content module (see ari-screen-prints-1 in the zip file). ----- This worked perfectly.

In the new (updated) site I have the following code (see ari-screen-prints-2 in the zip file for both the code AND the results).

I have stripped off all the {arisqltable} stuff from the old version, leaving just the SQL for the Smart Content SQL Source, but I just can't get this to work..... the actual SQL statement works perfectly of course, but I just can't get the headings formatted in the output, and also, I can't get the Time Convert to work.... (these do work properly in a straightforward MyPhpAdmin query).

I know I am missing something stupid, and that this is due to my ignorance, but if you could throw some light on this, I would be hugely grateful!

thanks,

Mike [http://www.ari-soft.com/images/fbfiles/files/ari\\_screen\\_prints.zip](http://www.ari-soft.com/images/fbfiles/files/ari_screen_prints.zip)

Hello,

Use the following query:

```
SELECT
  username AS `LOGON NAME`,
  ID,
  NAME,
  EMAIL,
  CONVERT_TZ(registerDate,'+00:00','+10:00') AS REGISTERED,
  lastVisitDate AS `LAST VISIT`
FROM
  #__users
WHERE
  block = 1
ORDER BY
  registerDate DESC
```

Regards,  
ARI Soft

Thank you so,so much!

I had the quote wrong.... sheesh..... how embarrassment (as a comedian here used to say).

Thanks a million folks for your time, your support and your great extensions

Mike
