
Hiding whole columns in CSV table

Posted by irwin - 2015/05/02 17:33

Hi.

I am using CSV-generated tables. I do not want to show all the columns because I still need the data in the CSV document, but to no avail. For example I tried to switch certain IDs to 'hide' in the column settings, but only the data is hidden, not the column headings. All the data simply shifted to the left.

Regards,
Irwin

Hello,

Could you send CSV file and screenshot(s) of data source settings by email so we can investigate the problem?

Regards,
ARI Soft
