
Thumbnails-Gen and Flash (swf)

Posted by Heiko813 - 2010/07/14 12:16

Hey,

i looked around but i cant find the answers i need to know.

i need following functions and im not sure, which product is the best for it:

- i want to upload pictures and edit them in the wysiwyg editor. automatically thumbnails should be created for articles and the link goes to the fullsize image in a lightbox without putting a rel-tag for each img (no matter sexy lb oder fancy lb)
- i want to put text-links in the articles to an swf and to youtube vids, also opening in a lightbox
- at best i can include flickr-albums...

Another questions btw.. is "inline-content" also swf files?

Thanks for helping me out..

Hello,

It seems ARI Sexy Lightbox is the most appropriate extension. It can generate thumbnails and shows large images in lightbox for images which is resized in WYSIWYG editor with help 'ARI Sexy Thumbnails' plugin and it can display Flash objects in link the lightbox if a user clicks by specific link.

Regards,
ARI Soft
