
To Smart Content - Selects data, but cant display

Posted by quigley595 - 2015/06/08 01:39

Hi folks... I can get this to work, but I dont think I am doing it properly (see the attached image for the SQL Data and the screen result).

I have the following select in the "Data" configuration area of the component:

```
SELECT
T1.virtuemart_product_id , T1.product_name , T1.product_s_desc , T1.product_desc , T2.product_price
FROM `wrf_virtuemart_products_en_gb` AS T1
INNER JOIN `wrf_virtuemart_product_prices` AS T2
ON T1.virtuemart_product_id = T2.virtuemart_product_id
ORDER BY T1.product_s_desc DESC
```

and in the columns table below I have tried to use the "T1. & the T2. prefix for the column names.
The data records select OK, but just dont display.

If I change the Select code to use the 'AS' construct (eg Select T1.product_description AS Decscription.. etc"), then everything works absolutely OK.

Can you tell me where I am going wrong????

Thanks,

Mike http://www.ari-soft.com/images/fbfiles/images/ARI_Smart_Content_Screen_Print_1.jpg http://www.ari-soft.com/images/fbfiles/files/ari_smart_content_screens.zip

Hello,

Use the following SQL query:

```
SELECT
  T1.virtuemart_product_id AS virtuemart_product_id,
  product_name,
  product_s_desc,
  product_desc,
  product_price
FROM
  `#__virtuemart_products_en_gb` AS T1 INNER JOIN `#__virtuemart_product_prices` AS T2
  ON T1.virtuemart_product_id = T2.virtuemart_product_id
ORDER BY
  T1.product_s_desc DESC
```

or

```
SELECT
  T1.virtuemart_product_id AS virtuemart_product_id,
  T1.product_name AS product_name,
  T1.product_s_desc AS product_s_desc,
  T1.product_desc AS product_desc,
  T2.product_price AS product_price
FROM
  `#__virtuemart_products_en_gb` AS T1 INNER JOIN `#__virtuemart_product_prices` AS T2
  ON T1.virtuemart_product_id = T2.virtuemart_product_id
ORDER BY
  T1.product_s_desc DESC
```

Regards,
ARI Soft
