
Javascript error in JNewsSlider w/ moveFx=\"bounce\"

Posted by twarfield - 2010/07/14 21:50

The other moveFX options work fine, but "bounce" causes an error:
Webpage error details

Hello,

When we open main page of your site, it seems the plugin works. If problem still appears, open 'ARI JQuery Loader' plugin settings page on the component backend and set 'No conflict' parameter to 'Yes'.

Regards,
ARI Soft

Thank you, on my home page I used moveFx="back" which doesn't have the problem.

Please compare

<http://www.warfieldconsulting.com/download-stats.html>

and

<http://www.warfieldconsulting.com/download-stats-bounce.html>

only difference is the first one has

moveFx="back"

and the second one has

moveFx="bounce"

- The "bounce" version loads OK, but after 4 seconds when it tries to transition to the next article, it gets the javascript error (yellow triangle in lower left corner of screen, with "error on page").

This is with the 'No conflict' parameter to 'Yes' in the 'ARI JQuery Loader' plugin.

Nevermind - I found the problem (I was loading JQuery twice).
