
Weird datatable module behaviour

Posted by dtws2008 - 2015/09/10 09:10

Hello,
I am using a Rockettheme template (Salient) and Joomla 3.4.4
Before upgrading to 3.4.4 from 3.4.3, all worked fine.
after upgrading, several things happened:

1. A table with about 180 rows, showing in the screen with all the 180 rows (Number of rows to display is set to 10) and stuck on PROCESSING....
When changing to SERVER SIDE PAGINATION to yes, it works ok.
2. the datatable module backend showing weird things (see attached image).

Other parameters settings:

Load method: On Load

Use constant ID: NO

Paging Mode: Simple

Paging List: yes

Using paging: yes

Any idea? http://www.ari-soft.com/images/fbfiles/images/Wierd_data_table_module_backend.JPG

After some time of tests I see that many other things are not working. It can be said that this is not working with the Rockettheme Salient template :(

Any thing that can be done?

=====

Hello,

Upgrade the component to v. 2.2.24.

Regards,

ARI Soft

Thanks for your reply.
Tried to install the component v. 2.2.24 on joomla 3.4.4, got the following:

Warning

Duplicate entry 'Connection to Joomla! database' for key 'Name' SQL=INSERT INTO

`wpj8r\_arismartcontent\_provider\_settings`

(`Id`,`Name`,`GroupId`,`Params`,`Description`,`CreatedBy`,`Created`,`ModifiedBy`,`Default`) VALUES (','Connection to Joomla!

database','2',{\"debug\":\"0\",\"connection\":\"joomla\",\"external_dbtype\":\"mysql\",\"external_dbhost\":\"\",\"external_dbuser\":\"\",\"external_dbpass\":\"\",\"external_dbname\":\"\",\"external_persistence\":\"0\",\"external_charset\":\"\"},','249','2015-09-10 15:45:37','0','1')

Error

Error installing component

Have you upgraded the extension without uninstalling a previous version like described here?

Regards,
ARI Soft

I work on localhost as test. I uninstalled the old version of smart content completely then tried to install v.2.2.24

upload_max_filesize is 20M.

Have I done something wrong?

I also tried "install from folder". got the same error

It doesn't require to uninstall a previous version of the extension to upgrade it.

Delete tables from database with #__arismartcontent prefix manually and install the extension.

Installation was successful! I will try few tables now.
Thanks a lot!!!

I will take advantage to the opportunity to ask: how can I display a table, for example with 2 fields, categories and subcategories. I need the table to break by categories. Meaning: category1 with its all subcategories. All the values in the category column should be blank until the next category item

The extension can't show tables in this format.

Thank you.

Now as before: A table with about 180 rows, showing in the screen with all the 180 rows (Number of rows to display is set to 10) and stuck on PROCESSING....

When changing to SERVER SIDE PAGINATION to yes, it works ok.

I want it to work without SERVER SIDE PAGINATION set to yes.

It can be a javascript conflict. Could you provide a link to a page where we can see the problem?

We sent mail which contains updated "ARI Smart Content - Data Table" application. You can also download "ARI Smart Content" in "Member Area" on our site, update it (install new version of the extension over installed one, the installer does all necessary updates) and clean browser's cache.

Regards,
ARI Soft

Works!!
A lot of thanks.!!!

What conflict was found?
